## Overview

picuBOOK is an interactive multilingual text book aimed at the pediatric intensive care community. It is constantly being updated, with new sections being incorporated on a regular basis. There are two additions for May; inflicted head injury and mechanical ventilation in asthma. This would appear to be a very useful resource.

## Content

There are, in addition, a wide range of resources available from this site. They include:

- 1) [A literature review section.](#)
- 2) [A number of evidence based medicine \(EBM\) resources, including a Word%20template that performs various clinical epidemiology calculations.](#)
- 3) [Javascript medical%20calculators.](#)
- 4) [A selection of Microsoft Access \(database\) templates for tracking patients and assessing treatment options.](#)
- 5) [A well organised list of web links.](#)

This site is well organised and is high on content. It is worth visiting if you specialise in pediatrics.

## Other comments

Constantly being updated.

## Evaluation

Access is free. Note the requirement for a Javascript enabled browser for the medical calculators.
